Subject Index of Volumes 168

AA1100 aluminium
Modelling of cold extrusion with experimental verification, 360
Abrasive water-jetting
Erosion testing of laser-cladding layers by abrasive water-jetting, 321
Acceptability conditions
Finite element bending analysis of oval tubes using rotary draw bender for hydroforming applications, 327
Activated carbon
Reduction of gum emitted from shell mold during casting aluminum alloy, 354
Adaptive modeling
An adaptive neural network model for predicting the post roughing mill temperature of steel slabs in the reheating furnace, 423
Adhesive bonded joint
A new proposed version of double containment joint, 401
Adhesive strength
Adhesive strength of CuCr alloy films evaluated by rolling contacting fatigue test, 258
Adiabatic shear band (ASB)
Characteristics of adiabatic shear bands in the orthogonal, cutting of $30CrNi_3MoV$ steel, 102
Aluminum alloy
Reduction of gum emitted from shell mold during casting aluminum alloy, 354
ANFIS
The prediction of wafer surface non-uniformity using FEM and ANFIS in the chemical mechanical polishing process, 250
Arc welding
Prediction and control of weld bead geometry and shape relationships in submerged arc welding of pipes, 478
Asymmetrical rolling
Influence of roll speed mismatch on strip curvature during the roughing stages of a hot rolling mill, 184
Austenitic
Cutting of 1.2 mm thick austenitic stainless steel sheet using pulsed and CW Nd:YAG laser, 438
Automobile front axle
Precision design of roll-forging die and its application in the forming of automobile front axles, 95
Average grain size
The critical conditions of brittle–ductile transition and the factors influencing the surface quality of brittle materials in ultra-precision grinding, 75

Back stress
Influence of back stresses in parts forming on crashworthiness, 49
$BaTiO_3$ and titanates
Grain growth control in Nb-doped $BaTiO_3$, 464
Bearing steel
Spray forming of homogeneous 100Cr6 bearing steel billets, 496
Biaxial tensile test
Biaxial tensile testing of cruciform specimen under complex loading, 181
Biochip
A new liquid crystalline polymer based processing aid and its effects on micro-molding process, 308
Biological agent
Biologically self-assembled porous polymers, 225
Boriding
Characterization of the operative mechanism in potassium fluoborate activated pack boriding of steels, 127
Braze welding
Fabrication of composite alloy cladding material by brazing process, 280
Brazing alloy
Fabrication of composite alloy cladding material by brazing process, 280
Brazing diffusion bonding
Brazing diffusion bonding of micro-nickel cylinders and SUS-316 stainless steel, 286
Brittle fracture mechanism
Erosion testing of laser-cladding layers by abrasive water-jetting, 321
Brittle–ductile transition
The critical conditions of brittle–ductile transition and the factors influencing the surface quality of brittle materials in ultra-precision grinding, 75
Burn-through
The onset of pipewall failure during "in-service" welding of gas pipelines, 414

Cam wear and wear profile
The dry wear profile of cam shaft, 373
Camber
A machine vision measurement of slab camber in hot strip rolling, 172
Carbon fibres
A comparative study on the development of pitch precursor for general-purpose carbon fibres, 316
Casting
Simulation of casting solidification and its grain structure prediction using FEM, 10
Characterization
Thick films fabricated by laser ablation of PZT microparticles, 273
CNC machining
Study on general analytical method for CNC machining the free-form surfaces, 408
Coal tar pitch
A comparative study on the development of pitch precursor for general-purpose carbon fibres, 316

Elsevier B.V.
doi:10.1016/S0924-0136(05)00800-9

Coaxial nozzle
Numerical simulation of metallic powder flow in a coaxial nozzle for the laser aided deposition process, 230
Coefficient of thermal expansion
Thermo-mechanical properties and regression models of alloys: AISI 305, CK 60, $CuBe_2$ and Laiton MS 63, 152
Cold rolling
The effect of roll roughness and lubricant viscosity on the loads on the mill during cold rolling of steel strips, 16
Computer aided process planning
A system for optimising cutting parameters when planning milling operations in high-speed machining, 25
Computer simulation of multi-pass rolling
The mathematical modelling of thermo-mechanical processing of steel during multi-pass shape rolling, 336
Concave, CAD/CAM system
Study on general analytical method for CNC machining the free-form surfaces, 408
Conjugate surfaces
Precision design of roll-forging die and its application in the forming of automobile front axles, 95
Controlled shape
Novel method of low-melting metal micropowders fabrication, 367
Convex
Study on general analytical method for CNC machining the free-form surfaces, 408
Crashworthiness
Influence of back stresses in parts forming on crashworthiness, 49
Creep-feed grinding
Heat transfer model for creep-feed grinding, 448
Crystal plasticity
A crystal plasticity based estimate for forming limit diagrams from textural inhomogeneities, 211
CuCr alloy film
Adhesive strength of CuCr alloy films evaluated by rolling contacting fatigue test, 258
Curing kinetics
Stereolithography Somos 7110 photosensitive resin: study of curing kinetic and thermal degradation, 164
Cutting quality
Cutting of 1.2 mm thick austenitic stainless steel sheet using pulsed and CW Nd:YAG laser, 438

Decision support system
A system for optimising cutting parameters when planning milling operations in high-speed machining, 25
Defects
Grain growth control in Nb-doped $BaTiO_3$, 464
Deformation wear mechanism
Erosion testing of laser-cladding layers by abrasive water-jetting, 321
Dentifrice abrasion
Wear and surface roughness of current veneered materials after toothbrush/dentifrice abrasion, 431
Die
Precision design of roll-forging die and its application in the forming of automobile front axles, 95
Dielectric properties
Grain growth control in Nb-doped $BaTiO_3$, 464
Differential pressure casting process
Reduction of gum emitted from shell mold during casting aluminum alloy, 354
Diffusion barrier
Adhesive strength of CuCr alloy films evaluated by rolling contacting fatigue test, 258
Diffusion
Kinetics of low temperature plasma carburizing of austenitic stainless steels, 189
Distortion
Spray forming of homogeneous 100Cr6 bearing steel billets, 496
Double containment joint
A new proposed version of double containment joint, 401
Dynamic recrystallization
Characteristics of adiabatic shear bands in the orthogonal, cutting of $30CrNi_3MoV$ steel, 102

EDM
Instantaneous fabrication of tungsten microelectrode based on single electrical discharge, 83
Elastic–plastic finite element method
Three-dimensional finite element analysis of tube spinning, 68
Electrical conductivity
Thermo-mechanical properties and regression models of alloys: AISI 305, CK 60, $CuBe_2$ and Laiton MS 63, 152
Electromagnetic forming
Effect of field shaper on magnetic pressure in electromagnetic forming, 245
Formability of steel sheet in high velocity impact, 390
Elementary solids
The development of 3D models through rapid prototyping concepts, 270
Emulsions
The effect of roll roughness and lubricant viscosity on the loads on the mill during cold rolling of steel strips, 16
Equal-channel angular extrusion
An upper-bound analysis for equal-channel angular extrusion, 137
Erosion
Erosion testing of laser-cladding layers by abrasive water-jetting, 321
Extrusion force
Modelling of cold extrusion with experimental verification, 360
Extrusion
Novel method of low-melting metal micropowders fabrication, 367

FA glass–ceramic
An advanced technique for recycling fly ash and waste glass, 56
Fabrication
Prediction and control of weld bead geometry and shape relationships in submerged arc welding of pipes, 478
FEM
Simulation of thermal stress in magnetron sputtered thin coating by finite element analysis, 36
Hydroforming of unwelded metal sheets using active-elastic tools, 195
The prediction of wafer surface non-uniformity using FEM and ANFIS in the chemical mechanical polishing process, 250
Field shaper
Effect of field shaper on magnetic pressure in electromagnetic forming, 245
Finite element analysis
Finite element analysis of thermal shock tests of RF connectors, 291
Finite element analysis of springback in L-bending of sheet metal, 296
Modelling of cold extrusion with experimental verification, 360
Finite element method (FEM)
Three-dimensional thermo–elastic–plastic coupled FEM simulations for metal oblique cutting processes, 42
Finite element method
Simulation of casting solidification and its grain structure prediction using FEM, 10

A crystal plasticity based estimate for forming limit diagrams from textural inhomogeneities, 211
Finite element model
Influence of roll speed mismatch on strip curvature during the roughing stages of a hot rolling mill, 184
Finite element modeling
Finite element bending analysis of oval tubes using rotary draw bender for hydroforming applications, 327
Finite-element modelling
A new proposed version of double containment joint, 401
Flux-less soldering
Development of a flux-less soldering method by ultrasonic modulated laser, 303
Fly ash
An advanced technique for recycling fly ash and waste glass, 56
Formability
A crystal plasticity based estimate for forming limit diagrams from textural inhomogeneities, 211
Formability of steel sheet in high velocity impact, 390
Forward extrusion
Modelling of cold extrusion with experimental verification, 360
Forward slip
Precision design of roll-forging die and its application in the forming of automobile front axles, 95
Free-form surfaces
Study on general analytical method for CNC machining the free-form surfaces, 408
Friction welding
Joining with friction welding of high-speed steel and medium-carbon steel, 202

Gas pipeline
The onset of pipewall failure during "in-service" welding of gas pipelines, 414
Gas
Cutting of 1.2 mm thick austenitic stainless steel sheet using pulsed and CW Nd:YAG laser, 438
Grinding in the ductile mode
The critical conditions of brittle–ductile transition and the factors influencing the surface quality of brittle materials in ultra-precision grinding, 75
Gum
Reduction of gum emitted from shell mold during casting aluminum alloy, 354

Hard cladding for steel
Fabrication of composite alloy cladding material by brazing process, 280
Hardfacing
Microstructure and wear properties of Fe-based hardfacing coating reinforced by TiC particles, 89
Hardness
Titanium nitride layer formation by TIG surface melting in a reactive environment, 471
Hastelloy alloy
Three-dimensional finite element analysis of tube spinning, 68
Heat transfer model
Heat transfer model for creep-feed grinding, 448
High velocity impact
Formability of steel sheet in high velocity impact, 390
High-pressure forming
Hydroforming of unwelded metal sheets using active-elastic tools, 195
High-rate forming
Formability of steel sheet in high velocity impact, 390
High-speed machining
A system for optimising cutting parameters when planning milling operations in high-speed machining, 25
High-speed steel
Joining with friction welding of high-speed steel and medium-carbon steel, 202
Hoop-buckle limit diagram
Finite element bending analysis of oval tubes using rotary draw bender for hydroforming applications, 327
Hot strip mill
An adaptive neural network model for predicting the post roughing mill temperature of steel slabs in the reheating furnace, 423
Hot strip rolling
A machine vision measurement of slab camber in hot strip rolling, 172
Hot-tapping
The onset of pipewall failure during "in-service" welding of gas pipelines, 414
Hydroforming
Hydroforming of unwelded metal sheets using active-elastic tools, 195
Hydrogen removal
Mathematical modeling and computer simulation of molten aluminum cleansing by the rotating impeller degasser. Part II. Removal of hydrogen gas and solid particles, 119

Image analysis
A machine vision measurement of slab camber in hot strip rolling, 172
Inclusion removal
Mathematical modeling and computer simulation of molten metal cleansing by the rotating impeller degasser. Part I. Fluid flow, 112
Mathematical modeling and computer simulation of molten aluminum cleansing by the rotating impeller degasser. Part II. Removal of hydrogen gas and solid particles, 119
Insert
Cutting conditions optimization when turning overlays, 488
'In-service' welding
The onset of pipewall failure during "in-service" welding of gas pipelines, 414
Interface bonding
Fabrication of composite alloy cladding material by brazing process, 280

Journal bearing
Effects of shaft surface texture on journal bearing pressure distribution, 344

Kinetics
Kinetics of low temperature plasma carburizing of austenitic stainless steels, 189

Laser ablation
Thick films fabricated by laser ablation of PZT microparticles, 273
Laser aided deposition process
Numerical simulation of metallic powder flow in a coaxial nozzle for the laser aided deposition process, 230
Laser cladding
Erosion testing of laser-cladding layers by abrasive water-jetting, 321
L-bending
Finite element analysis of springback in L-bending of sheet metal, 296
Liquid crystalline polymer
A new liquid crystalline polymer based processing aid and its effects on micro-molding process, 308
Localisation
A crystal plasticity based estimate for forming limit diagrams from textural inhomogeneities, 211

Lost-wall thickness
The onset of pipewall failure during "in-service" welding of gas pipelines, 414
Low-melting-point metal alloy
Novel method of low-melting metal micropowders fabrication, 367

Machining Parameters
A system for optimising cutting parameters when planning milling operations in high-speed machining, 25
Magnesium alloys
Process optimisation for a squeeze cast magnesium alloy metal matrix composite, 262
Magnetic pressure
Effect of field shaper on magnetic pressure in electromagnetic forming, 245
Magnetic properties
Process parameter selection for strontium ferrite sintered magnets using Taguchi L9 orthogonal design, 147
Material flow
Hydroforming of unwelded metal sheets using active-elastic tools, 195
Mathematical modelling
The mathematical modelling of thermo-mechanical processing of steel during multi-pass shape rolling, 336
Mechanical properties
Process optimisation for a squeeze cast magnesium alloy metal matrix composite, 262
Influence of microstructure on mechanical properties of molybdenum alloyed P/M steels, 505
Medium-carbon steel
Joining with friction welding of high-speed steel and medium-carbon steel, 202
Melt degassing
Mathematical modeling and computer simulation of molten aluminum cleansing by the rotating impeller degasser. Part II. Removal of hydrogen gas and solid particles, 119
Melt degssaing
Mathematical modeling and computer simulation of molten metal cleansing by the rotating impeller degasser. Part I. Fluid flow, 112
Melt depth
Titanium nitride layer formation by TIG surface melting in a reactive environment, 471
Metal matrix composites
Process optimisation for a squeeze cast magnesium alloy metal matrix composite, 262
Metal stamping
Finite element analysis of springback in L-bending of sheet metal, 296
Metallic fiber
Fabrication of stainless steel and aluminum fibers by PDME method, 62
Metallic powder
Numerical simulation of metallic powder flow in a coaxial nozzle for the laser aided deposition process, 230
Microelectrode fabrication
Instantaneous fabrication of tungsten microelectrode based on single electrical discharge, 83
Micro-gear
A new liquid crystalline polymer based processing aid and its effects on micro-molding process, 308
Micro-molding
A new liquid crystalline polymer based processing aid and its effects on micro-molding process, 308
Micropowder
Novel method of low-melting metal micropowders fabrication, 367
Microstructure and abrasiveness
Fabrication of composite alloy cladding material by brazing process, 280
Microstructure
Microstructure and wear properties of Fe-based hardfacing coating reinforced by TiC particles, 89
Grain growth control in Nb-doped $BaTiO_3$, 464
3D models
The development of 3D models through rapid prototyping concepts, 270
Modulated laser
Development of a flux-less soldering method by ultrasonic modulated laser, 303
Molten metal treatment
Mathematical modeling and computer simulation of molten metal cleansing by the rotating impeller degasser. Part I. Fluid flow, 112
Mathematical modeling and computer simulation of molten aluminum cleansing by the rotating impeller degasser. Part II. Removal of hydrogen gas and solid particles, 119

Nanoparticles
Thick films fabricated by laser ablation of PZT microparticles, 273
Narrow size distribution
Novel method of low-melting metal micropowders fabrication, 367
Nd:YAG Laser
Cutting of 1.2 mm thick austenitic stainless steel sheet using pulsed and CW Nd:YAG laser, 438
Neural networks
Effects of shaft surface texture on journal bearing pressure distribution, 344
Nickel cylinders
Brazing diffusion bonding of micro-nickel cylinders and SUS-316 stainless steel, 286
Nitriding
Titanium nitride layer formation by TIG surface melting in a reactive environment, 471
Non-uniformity
The prediction of wafer surface non-uniformity using FEM and ANFIS in the chemical mechanical polishing process, 250
Numerical analysis
Development of a flux-less soldering method by ultrasonic modulated laser, 303
Numerical modelling
The onset of pipewall failure during "in-service" welding of gas pipelines, 414
Numerical simulation
Numerical simulation of metallic powder flow in a coaxial nozzle for the laser aided deposition process, 230
Effect of field shaper on magnetic pressure in electromagnetic forming, 245

Oblique cutting
Three-dimensional thermo–elastic–plastic coupled FEM simulations for metal oblique cutting processes, 42
On-line measurement
A machine vision measurement of slab camber in hot strip rolling, 172
Optimization of cutting conditions
Cutting conditions optimization when turning overlays, 488
Orthogonal array design
Process parameter selection for strontium ferrite sintered magnets using Taguchi L9 orthogonal design, 147
Orthogonal cutting
Characteristics of adiabatic shear bands in the orthogonal, cutting of $30CrNi_3MoV$ steel, 102

Oval tubes
Finite element bending analysis of oval tubes using rotary draw bender for hydroforming applications, 327
Overlay
Cutting conditions optimization when turning overlays, 488

Pack activation
Characterization of the operative mechanism in potassium fluoborate activated pack boriding of steels, 127
Pack boriding
Characterization of the operative mechanism in potassium fluoborate activated pack boriding of steels, 127
Parameters
Cutting of 1.2 mm thick austenitic stainless steel sheet using pulsed and CW Nd:YAG laser, 438
PDME
Fabrication of stainless steel and aluminum fibers by PDME method, 62
Peclet number
Heat transfer model for creep-feed grinding, 448
Permanent magnets
Process parameter selection for strontium ferrite sintered magnets using Taguchi L9 orthogonal design, 147
Petroleum pitch
A comparative study on the development of pitch precursor for general-purpose carbon fibres, 316
Photopolymer characterization
Stereolithography Somos 7110 photosensitive resin: study of curing kinetic and thermal degradation, 164
PID controller
Biaxial tensile testing of cruciform specimen under complex loading, 181
Pipe-wall failure
The onset of pipewall failure during "in-service" welding of gas pipelines, 414
Pitch blend
A comparative study on the development of pitch precursor for general-purpose carbon fibres, 316
Plane stress
A non-quadratic plane stress yield function for orthotropic sheet metals, 1
Plasma carburizing
Kinetics of low temperature plasma carburizing of austenitic stainless steels, 189
Plasma nitriding
Potential of plasma nitriding of polymer for improved hardness and wear resistance, 219
Plasma
Instantaneous fabrication of tungsten microelectrode based on single electrical discharge, 83
Plastic anisotropy
A non-quadratic plane stress yield function for orthotropic sheet metals, 1
Polycarbonate
A new liquid crystalline polymer based processing aid and its effects on micro-molding process, 308
Polymer
Potential of plasma nitriding of polymer for improved hardness and wear resistance, 219
Novel method of low-melting metal micropowders fabrication, 367
Polymers
Biologically self-assembled porous polymers, 225
Porosity
Biologically self-assembled porous polymers, 225
Porous polymer fabrication
Biologically self-assembled porous polymers, 225
Potassium fluoborate
Characterization of the operative mechanism in potassium fluoborate activated pack boriding of steels, 127
Powders–solid state reaction
Grain growth control in Nb-doped $BaTiO_3$, 464
Prealloyed powders
Influence of microstructure on mechanical properties of molybdenum alloyed P/M steels, 505
Probe
Instantaneous fabrication of tungsten microelectrode based on single electrical discharge, 83
Processing aid
A new liquid crystalline polymer based processing aid and its effects on micro-molding process, 308
PVD
Simulation of thermal stress in magnetron sputtered thin coating by finite element analysis, 36
PZT thick film
Thick films fabricated by laser ablation of PZT microparticles, 273

Rapid prototyping
The development of 3D models through rapid prototyping concepts, 270
Rapid solidification
Spray forming of homogeneous 100Cr6 bearing steel billets, 496
Real-time
The dry wear profile of cam shaft, 373
Reduction ratio
Modelling of cold extrusion with experimental verification, 360
Resistance sintering
Fabrication of W–Cu composite by resistance sintering under ultrahigh pressure, 107
RF connector
Finite element analysis of thermal shock tests of RF connectors, 291
Roll roughness
The effect of roll roughness and lubricant viscosity on the loads on the mill during cold rolling of steel strips, 16
Roll-forging
Precision design of roll-forging die and its application in the forming of automobile front axles, 95
Rolling contact fatigue
Adhesive strength of CuCr alloy films evaluated by rolling contacting fatigue test, 258
Rotary draw bending
Finite element bending analysis of oval tubes using rotary draw bender for hydroforming applications, 327
Rotating impeller degasser
Mathematical modeling and computer simulation of molten aluminum cleansing by the rotating impeller degasser. Part II. Removal of hydrogen gas and solid particles, 119

Sepiolite
Reduction of gum emitted from shell mold during casting aluminum alloy, 354
Serrated chip
Characteristics of adiabatic shear bands in the orthogonal, cutting of $30CrNi_3MoV$ steel, 102
Severe plastic deformation
An upper-bound analysis for equal-channel angular extrusion, 137
Shape degradation factor
Finite element bending analysis of oval tubes using rotary draw bender for hydroforming applications, 327
Sheet metal forming
A non-quadratic plane stress yield function for orthotropic sheet metals, 1
Influence of back stresses in parts forming on crashworthiness, 49
Hydroforming of unwelded metal sheets using active-elastic tools, 195

Shell mold core
Reduction of gum emitted from shell mold during casting aluminum alloy, 354
Simulation
Three-dimensional finite element analysis of tube spinning, 68
Single electrical discharge
Instantaneous fabrication of tungsten microelectrode based on single electrical discharge, 83
Sintered magnets
Process parameter selection for strontium ferrite sintered magnets using Taguchi L9 orthogonal design, 147
Sintered steels
Influence of microstructure on mechanical properties of molybdenum alloyed P/M steels, 505
Solidification
Simulation of casting solidification and its grain structure prediction using FEM, 10
Spinneret
Brazing diffusion bonding of micro-nickel cylinders and SUS-316 stainless steel, 286
Spray forming
Spray forming of homogeneous 100Cr6 bearing steel billets, 496
Springback
Finite element analysis of springback in L-bending of sheet metal, 296
Squeeze casting
Process optimisation for a squeeze cast magnesium alloy metal matrix composite, 262
Stainless steel
Fabrication of stainless steel and aluminum fibers by PDME method, 62
Kinetics of low temperature plasma carburizing of austenitic stainless steels, 189
Cutting of 1.2 mm thick austenitic stainless steel sheet using pulsed and CW Nd:YAG laser, 438
Steel sheet
Formability of steel sheet in high velocity impact, 390
Steel
The effect of roll roughness and lubricant viscosity on the loads on the mill during cold rolling of steel strips, 16
Strip curvature
Influence of roll speed mismatch on strip curvature during the roughing stages of a hot rolling mill, 184
Strontium ferrite
Process parameter selection for strontium ferrite sintered magnets using Taguchi L9 orthogonal design, 147
Structural parameters
Effect of field shaper on magnetic pressure in electromagnetic forming, 245
Surface engineering
Potential of plasma nitriding of polymer for improved hardness and wear resistance, 219
Surface roughness
Effects of shaft surface texture on journal bearing pressure distribution, 344
Wear and surface roughness of current veneered materials after toothbrush/dentifrice abrasion, 431
Surface texture
Effects of shaft surface texture on journal bearing pressure distribution, 344
Surfacing technology
Cutting conditions optimization when turning overlays, 488
SUS-316 stainless steel
Brazing diffusion bonding of micro-nickel cylinders and SUS-316 stainless steel, 286
Taguchi L9 design
Process parameter selection for strontium ferrite sintered magnets using Taguchi L9 orthogonal design, 147
Test system
Biaxial tensile testing of cruciform specimen under complex loading, 181
Textural inhomogeneities
A crystal plasticity based estimate for forming limit diagrams from textural inhomogeneities, 211
Thermal conductivity
Thermo-mechanical properties and regression models of alloys: AISI 305, CK 60, $CuBe_2$ and Laiton MS 63, 152
Thermal degradation
Stereolithography Somos 7110 photosensitive resin: study of curing kinetic and thermal degradation, 164
Thermal flow stress
Thermo-mechanical properties and regression models of alloys: AISI 305, CK 60, $CuBe_2$ and Laiton MS 63, 152
Thermal shock
Finite element analysis of thermal shock tests of RF connectors, 291
Thermal stress
Simulation of thermal stress in magnetron sputtered thin coating by finite element analysis, 36
Thermal–mechanical and microstructural processing of steel
The mathematical modelling of thermo-mechanical processing of steel during multi-pass shape rolling, 336
Thermo-mechanical coupling
Three-dimensional thermo–elastic–plastic coupled FEM simulations for metal oblique cutting processes, 42
Thin coating
Simulation of thermal stress in magnetron sputtered thin coating by finite element analysis, 36
TIG torch
Titanium nitride layer formation by TIG surface melting in a reactive environment, 471
TiN
Simulation of thermal stress in magnetron sputtered thin coating by finite element analysis, 36
Titanium carbide
Microstructure and wear properties of Fe-based hardfacing coating reinforced by TiC particles, 89
Tube spinning
Three-dimensional finite element analysis of tube spinning, 68
Tubular hydroforming
Finite element bending analysis of oval tubes using rotary draw bender for hydroforming applications, 327
Turning of overlays
Cutting conditions optimization when turning overlays, 488

UHMWPE
Potential of plasma nitriding of polymer for improved hardness and wear resistance, 219
Ultra-high pressure
Fabrication of W–Cu composite by resistance sintering under ultra-high pressure, 107
Ultra-precision grinding
The critical conditions of brittle–ductile transition and the factors influencing the surface quality of brittle materials in ultra-precision grinding, 75
Ultrasonic cavitation
Development of a flux-less soldering method by ultrasonic modulated laser, 303
Upper-bound analysis
An upper-bound analysis for equal-channel angular extrusion, 137

Veneered materials
Wear and surface roughness of current veneered materials after toothbrush/dentifrice abrasion, 431
Virtual testing
Finite element analysis of thermal shock tests of RF connectors, 291

Wafer
The prediction of wafer surface non-uniformity using FEM and ANFIS in the chemical mechanical polishing process, 250
Walking beam furnace
An adaptive neural network model for predicting the post roughing mill temperature of steel slabs in the reheating furnace, 423
Waste glass
An advanced technique for recycling fly ash and waste glass, 56
Wear
Microstructure and wear properties of Fe-based hardfacing coating reinforced by TiC particles, 89
Potential of plasma nitriding of polymer for improved hardness and wear resistance, 219
Wear and surface roughness of current veneered materials after toothbrush/dentifrice abrasion, 431
Weld bead geometry
Prediction and control of weld bead geometry and shape relationships in submerged arc welding of pipes, 478
Welding
Joining with friction welding of high-speed steel and medium-carbon steel, 202
W–Cu composite
Fabrication of W–Cu composite by resistance sintering under ultra-high pressure, 107

Yield function
A non-quadratic plane stress yield function for orthotropic sheet metals, 1
